Skin Contact	- Seek medical evaluation and treatment as soon as possible.	
Ingestion	- Ingestion is not considered a potential route of exposure.	
Inhalation	 In high concentrations may cause asphyxiation. Symptoms may include loss of mobility/consciousness. Victim may not be aware of asphyxiation. Remove victim to uncontaminated area wearing self-contained breathing apparatus. Keep victim warm and rested. Seek medical attention. Apply artificial respiration if breathing stopped. Low concentrations of Roboshield will not 	
	cause irritation .

Specific Hazards	- Asphyxiant in high concentrations.
Special fire fighting procedures:	- In case of fire: Stop leak if safe to do so. Continue water spray from protected position until container stays cool. Use extinguishants to contain the fire.
Special protective equipment for firefighters:	- Exposed Firefighters must use standard protective equipment including flame retardant coat, helmet with face shield, gloves, rubber boots, and in enclosed spaces a self-contained breathing apparatus.

6. ACCIDEN	6. ACCIDENTAL RELEASE MEASURES	
Personal precautions, protective equipment and emergency procedures:	- Evacuate area Provide adequate ventilation Wear self-contained breathing apparatus when entering area unless atmosphere is proved to be safe In an enclosed or non-ventilated space, a self-contained breathing apparatus must be used.	
Environmental Precautions	- Prevent further leakage or spillage if safe to do so.	
Methods and material for containment and cleaning up:	- Provide adequate ventilation.	

7. HANDLING AND STORAGE

Safe Handling

Only experienced and properly instructed persons should handle gases under pressure. Use only properly specified equipment which is suitable for this product, its supply pressure and temperature. Refer to supplier's handling instructions. The substance must be handled in accordance with good industrial hygiene and safety procedures. Protect containers from physical damage; do not drag, roll, slide or drop. Do not remove or deface labels provided by the supplier for the identification of the container contents. When moving containers, even for short distances, use appropriate equipment eg. trolley, hand truck, fork truck etc. Secure cylinders in an upright position at all times, close all valves when not in use. Provide adequate ventilation. Suck back of water into the container must be prevented. Do not allow backfeed into the container. Observe all regulations and local requirements regarding storage of containers. When using do not eat, drink or smoke. Store in accordance with local/regional/national/international regulations. Never use direct flame or electrical heating devices to raise the

pressure of a container. Leave valve protection caps in place until the container has been secured against either a wall or bench or placed in a container stand and is ready for use. Damaged valves should be reported immediately to the supplier Close container valve after each use and when empty, even if still connected to equipment. Never attempt to repair or modify container valves or safety relief devices. Replace valve outlet caps or plugs and container caps were supplied as soon as container is disconnected from equipment. Keep container valve outlets clean and free from contaminants particularly oil and water. If user experiences any difficulty operating container valve discontinue use and contact supplier. Never attempt to transfer gases from one container to another. Container valve guards or caps should be in place. -Containers should not be stored in conditions likely to encourage corrosion. Keep away from food, drink and animal feeding stuffs. Stored containers should be periodically checked for general conditions and leakage. Container valve guards or caps should be in place. Store

containers in location free from fire risk and away from sources of heat and ignition. Keep pressure containers away

8. EXPOSURE CONTROLS AND PERSONAL PROTECTION

from combustible material.

Occupational Exposure Hazards (HCS)	-Not specified
Engineering Control Measures	- Engineering control measures are preferred to reduce exposures. General methods include mechanical ventilation, process or personal enclosure, and control of process conditions. Administrative controls and personal

A Risk assessment should be conducted to evaluate the suitability of PPE to the task being performed

protective equipment may also be required.

Personal Protection

Conditions for

safe storage,

including any

incompatibilities

When allowed by a risk assessment Respiratory Protective Equipment (RPE) may be used. The selection of the Respiratory Protective Device (RPD) must be based on known or anticipated exposure levels, the hazards of the product and the safe working limits of the selected RPD. Self-contained breathing apparatus (SCBA) or positive pressure airline with mask are to be used in oxygen-deficient atmospheres.
