When it comes to short haul, we're with you for the long haul

As the demand for goods grows, business has to find ways to reach markets quickly and flexibly without sacrificing reliability. Improved materials handling at every level – from material input, through manufacture, during packaging, storage and final distribution to the consumer – is part of this drive.

The forklift is often at the centre of this cycle and Afrox Autogas is part of the solution. Afrox Autogas is cost-saving, efficient forklift and vehicle fuel from Afrox Handigas – the leaders in the liquefied petroleum gas market.

Afrox Autogas directly cuts fuel costs, extends maintenance intervals for the hard-working forklift fleet and significantly improves engine life. Afrox Autogas has a solid reputation in the beverage, food and pharmaceutical markets. With the power to work in heavy manufacturing and the odour free integrity that takes it into carpet mills, Afrox Autogas is the fuel for forklifts.

Tried and tested as a short-haul fuel

Afrox Autogas cleans up in comparative tests against other fuels for forklift trucks in the one to five ton range. These forklifts satisfy the broadest range of indoor and outdoor materials handling markets. The use of Afrox Autogas as a clean, versatile and effective fuel is supported by the long-established precedent.

It is always ready to work

Afrox Autogas powered forklifts can work continuously through multiple shifts, 24-hours a day. Refuelling is a simple matter of replacing one cylinder with another. This cylinder swap takes minutes and is done while the operator checks the operational integrity of the system.

Electrical systems, where the possibility of extending a shift is limited by battery life, are much less efficient. In most cases the forklift is forced to stand idle for six to eight hours while batteries recharge. In cases where batteries are swapped, it is a time-consuming, cumbersome and fairly complicated procedure.

It is the refined alternative

Afrox Autogas is the cleanest burning product of the oil-refining process and outperforms petrol and diesel. Afrox Autogas is captured at the highest and cleanest point of the refining process, providing a fuel that allows for quiet, clean, odour-free operation and longer service intervals on equipment.

It is the choice indoors or out

Afrox Autogas has no peers when it comes to indoor/outdoor forklifts. It is well-established in factories and warehouses where exhaust emissions and noise pollution restrict petrol and diesel machines to the yard. The products of Autogas combustion, moisture and carbon dioxide, are non-toxic.

It keeps variable costs in check

With Afrox Autogas it is possible to keep tabs on variable costs. Checks and balances are simplified by the use of a closed-fuel system and the fact that a single tank of Handigas in most cases keeps a forklift operating for one shift.

It is the versatile dual-fuel choice

Afrox Autogas can be used interchangeably with petrol on suitably converted vehicles. Both older vehicles designed for petrol power and modern LPGas forklift trucks can be converted and used as dual-fuel vehicles. In nearly all cases dual-fuel vehicles only switch to the petrol supply in an emergency.
